

thermalipo

Takes care of your body. You will love it!

The **thermalipo**™ offers a pain-free method to treat cellulite, lax skin and localized fat. The orange peel appearance of the skin is reduced; the treated areas are firm and show better color and texture. There are practically no side effects for patients to worry about either. The only known side effect is a superficial burn which is very rare.

thermalipo™ uses Automatic Multi-Frequency and Low Impedance technology (AMFLI). Multiple frequencies reach different tissue depths thus eliminating the need to combine **thermalipo**™ with other therapies. The successful outcomes are related to AMFLI technology's ability to deliver a much higher energy, which raises the temperature rapidly and improves the results. Higher frequency gives more superficial penetration in tissue, while lower frequency gives higher penetration. The device uses frequencies high enough to avoid muscle stimulation effects or cardiac fibrillation, yet low enough to reach the optimal depth required to act on localized fat.

thermalipo™'s bi-polar applicator contributes to its pain-free treatment and prevents the dispersion of radiofrequency energy, keeping it concentrated on the treatment zone. The applicator generates high current without causing pain which is another of the AMFLI technology's advantages. In a single treatment session the operator can treat cellulite, localized fat, or lax and redundant skin located in the same area, thanks to this technology.

thermalipo

✓ System Specifications

TECHNOLOGY	Radiofrequency / Bipolar / Automatic Multifrequency & Low Impedance (AMFLI)
RF POWER	Up to 200w
FREQUENCY	Multifrequency: 0.6 / 1.2 / 1.8 / 2.4 MHz
PULSE REPETITION RATE	1.2 sec. to 1.5 sec.
CONTACT SURFACE / SPOT SIZE	33 cm2
IMPEDANCE CONTROL	Automatic Online / Audio Signal
POWER SUPPLY	115-230 VAC / 50-60Hz / 0.7A
SIZE	92 cm x 48 cm x 56 cm (HWD)
WEIGHT	20 Kg
CE DIRECTIVES	89 / 336 / CEE 73 / 23 / CEE
NORMS	En 60601-1 + En 55011 + En 55014 + En 61000-3-2 + En 61000-3-3 + En 61000-6-1 + En 61000-4-2 + En 61000-4-3 + En 61000-4-4 + En 61000-4-5 + En 61000-4-6 +

THE NEW ERA
MEDICAL CELLULITE
SOLUTION

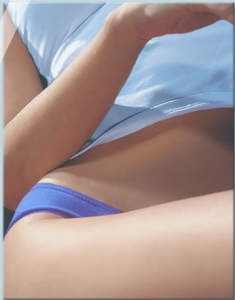

thermalipo
AMFLI TECHNOLOGY

Virtually pain-free and safe
Thermalipo Bi-Polar RF System
for the Treatment of Cellulite

thermalipo

Eliminate Cellulite, Recontour your body

thermalipo™, in addition to reducing cellulite and body volume, also induces collagen contraction which results in tightened, younger looking skin. Within a short period of time patients can start to enjoy their new look. Results are long lasting. Both women and men will be keen to undergo the thermalipo™ treatment and enjoy a new younger, natural contoured look of their body.

thermalipo™ effectiveness has been proven on hundreds of patients, in a multicenter clinical trial which included university medical centers.

thermalipo™ is a technological breakthrough based on Radiofrequency Selective Thermo Induction.

Fat lysis is achieved by effectively breaking down adipocytes without causing damage to surrounding tissues, nerves or blood vessels. Result is predictable. Circumference and volume of the treated area are reduced in a virtually painless treatment.

thermalipo™ is based on unique AMFLI technology: Automatic Multi Frequency and Low Impedance.

thermalipo™ is the safest technology available. It affects localised fat zones and helps to recontour the body to its natural shape.

thermalipo™ was designed by dermatologists to be easily operated by both physicians as well as other healthcare professionals.

thermalipo™ also has the ability to enhance delivery of substances into the dermis to improve the skin condition in order to obtain better response to the treatment. The entire course of treatment takes three to four months, depending on pathology and the size characteristic of the treated area eight to twelve sessions are usually required per zone, with treatment intervals ranging from seven to ten days. Men and women aged 18 to 60 years respond best to the thermalipo™

thermalipo

✓ The benefits of at a glance:

Effective on abdomen, buttocks, thighs, arms, knees

Body contour reduction as well as collagen contraction results in tightened, younger looking skin

Liposuction-like results in localized areas

Safe, gentle, low risk, pain-free

Visible results after first few treatment

No downtime, non-invasive: patients can immediately return to normal activity

Easy to operate and maintain

Ergonomic design

Proven highly effective on hundreds of patients

Multicentre clinical study conducted by leading European university hospitals, clinical centres and opinion leaders
